EXAMPLE REPORT - FOR ILLUSTRATION PURPOSES ONLY

A COMPOSITE REVIEW · THE GROUP IS INVENTED, THE PATTERNS ARE NOT

Read together for the first time, your seven asset registers show an estate under-declared by £340,000 - and records that cannot yet evidence what you own.

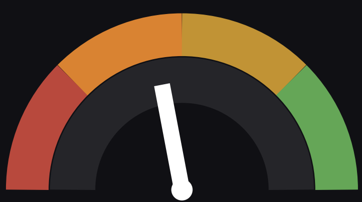
Fourteen profiling beds recorded in two homes simultaneously. A wing closed for refurbishment in 2024, still fully equipped on paper and on the insurance schedule. Purchase dates absent in six of seven homes. Each finding is priced and actioned in the pages that follow.

Built only from records you already hold. No site visit. No new software. No disruption to care.

ESTATE INTELLIGENCE HEALTH - WHAT THE RECORDS CAN EVIDENCE

Estate Intelligence Health

How visible, reliable and protected is your portfolio?



44%

Overall Health Score

ATTENTION REQUIRED

CRITICAL	POOR	FAIR	STRONG
0-25%	25-50%	50-75%	75-100%

Purchase date visibility	**8%**
Declared value vs replacement	**72%**
Warranty & service data coverage	**12%**
Register integrity	**55%**
Refresh planning visibility	**14%**

The score is not a judgement on your group or your care. It measures how much of your estate can be evidenced from records you already hold - the same records a lender, insurer or buyer will ask to see.

EXAMPLE REPORT - FOR ILLUSTRATION PURPOSES ONLY

FIVE FINDINGS - AND WHY THE FIFTH IS THE ONE THAT MATTERS

Five findings from your registers. Each states what was found, what it means, and the action it requires.

A NOTE ON WHAT THESE FINDINGS SAY ABOUT YOUR GROUP
Nothing here is unusual. Missing purchase dates, sparse warranty data and internal contradictions are the norm in almost every operator we review. What is unusual is seeing them together, priced, before an insurer, lender or buyer does.

1 Fourteen profiling beds recorded in two homes at once.

Fourteen asset tags appear in two of your homes' registers simultaneously. You cannot currently evidence which building holds them - or whether either does. Action: reconcile duplicate tags before the next insurance declaration.

Found in the records - asset-tag cross-check across your 7 registers.

2 A closed wing, still fully equipped on paper.

Sixty assets - beds, hoists, furniture - remain registered and insured to a wing closed for refurbishment in 2024, alongside acquisitions recorded after disposal. You are paying premium on equipment that may no longer exist. Action: strike disposed assets and correct the register before it is next relied upon.

Found in the records - location and date field validation across your 7 registers.

3 Your estate is under-declared by £340,000.

You declare £0.88m. Replacement cost of the same equipment is £1.22m. In a total-loss claim you absorb the difference - a direct hit to the P&L of the affected home - while still insuring equipment that no longer exists. Action: re-declare at replacement value and remove disposed assets from the schedule.

Found in the records - your declared values against replacement pricing, 7 registers.

4 Six of your seven homes cannot evidence the age of a single asset.

Purchase dates were never captured. You cannot evidence asset age, plan replacement on fact, or answer the first question a buyer's due diligence team asks - unevidenced capex history is priced against you in a sale. Action: recover dates through a short supplier-records exercise - most are retrievable.

Found in the records - Purchase Date column, blank in 6 of your 7 registers.

5 None of the above was the real problem.

Every finding on this page sat in your own records, unread - because nothing in a normal year reads seven registers against each other. That is not a failing; a well-run group would miss all of it. Reading your records before a lender, insurer or buyer has to is what this review has done.

Found in the records - the pattern across every review Prism has produced.

EXAMPLE REPORT - FOR ILLUSTRATION PURPOSES ONLY

WHAT YOUR REGISTERS CANNOT TELL YOU

This review is built only from the records you supplied. Four things it therefore cannot establish - stated plainly, because that is what makes the rest of this report reliable.

- Whether an asset is physically in your buildings. A register records what was entered, not what is present. Closed by an onsite verification audit.
- How old each asset is. No purchase dates exist in six of your seven registers, so age can be estimated but never evidenced. Closed by a supplier-records exercise.
- The service and examination status of your lifting and care equipment. Those records exist - in your LOLER and servicing files - but your registers do not hold them, so the two cannot yet be read together. Closed by supplying the servicing records.
- Whether each declared insurance value matches today's replacement cost. Your registers alone cannot confirm every entry. Closed by re-declaring at replacement pricing.

THESE GAPS ARE CLOSABLE

Every gap on this page is closable, and none needs new software or any disruption to care delivery. Purchase dates and warranty status: a short supplier-records exercise per home. Physical presence and condition: an onsite verification audit, scheduled around the home. This review shows which gaps are worth closing first - it does not pretend to have closed the ones it cannot see.

EXAMPLE REPORT - FOR ILLUSTRATION PURPOSES ONLY

THE NEXT LAYER - YOUR COMPLIANCE RECORDS, READ TOGETHER

This review was built from your asset registers alone. But a register is only one of the record sets your group already holds. Every year each home generates a stack of statutory compliance documents - and, like the registers, they are filed home by home and rarely read across one another. That is where the next layer of intelligence sits.

RECORDS EACH HOME ALREADY COMMISSIONS EVERY YEAR

- Fire risk assessments
- LOLER thorough examinations (hoists & lifts)
- Gas safety & boiler servicing certificates
- Water hygiene (L8 / legionella) records
- Fixed wiring (EICR) reports
- Asbestos management surveys & re-inspections
- Nurse call & fire alarm servicing records
- Three-to-five-year capital expenditure history

WHAT A REVIEW SURFACES WHEN THESE ARE SUPPLIED

Where compliance actions cluster - and whether your capex follows them.

Cross-referencing open actions by home against your capital plan exposes where high-risk buildings receive little investment while low-risk ones absorb it.

Equipment technically compliant, but nearing the end of its life.

A hoist or boiler can pass its last examination and still be two years from failure. Read against asset age, the review flags what is compliant today and a budget shock tomorrow.

Findings signed off, then never actioned in a capital plan.

Recommendations from a fire risk assessment or EICR that never made it into subsequent budgets - a gap an inspector, insurer or buyer can see even if your board cannot.

Insurance carried at full value on equipment rated unsatisfactory.

Where a compliance report rates an asset poor or end-of-life while it is still declared at full replacement value, the exposure sits with you.

Documentation gaps and overdue re-inspections.

Legionella reviews past their date, asbestos re-inspections lapsed, LOLER examinations due - the quiet gaps that become urgent the moment a regulator or underwriter asks.

SUPPLY THE DOCUMENTS - THE ANALYSIS IS INCLUDED

A forward three-year compliance pipeline - examinations falling due, certificates expiring, recommendations becoming overdue - so your board sees what is coming before it arrives. None of this requires new inspections or a site visit. It is produced by reading the compliance documents each home already commissions, alongside the registers. Supply the documents, and this analysis is included in your review at no additional cost.

FOR THE NEXT BOARD MEETING

The paragraph below is written to be lifted directly into the next board or investment committee papers. Change nothing, or change everything - it exists so this review becomes a board decision, not a filed PDF.

READY TO PASTE - AGENDA ITEM / MINUTE TEXT

The Board considered the Prism Portfolio Estate Intelligence Review of the group's asset registers across its seven homes, noting: internal contradictions within the registers (the same assets logged in two homes; equipment recorded against a wing closed in 2024), an insurance under-declaration of £340,000, and an inability to evidence asset age in six of seven homes. The Board noted that none of these findings would have emerged in the normal run of the year, and resolved to reconcile the register exceptions and re-declare the estate at replacement value ahead of the next insurance renewal, retaining the review as supporting evidence for lender reporting and the well-led element of regulatory inspection.

THE THREE ACTIONS, NAMED AND OWNED

1. **Table this review at the next board or investment committee meeting and adopt the minute above.**
   Owner: CFO | Deadline: next meeting | The findings are priced and the resolution is drafted
2. **Reconcile the contradictions this review surfaces - duplicate tags, retired rooms, impossible dates.**
   Owner: CFO with Home Managers | Prism supplies per-home exception lists
3. **Re-declare the estate at replacement value and close the recording gaps - purchase dates, warranty, servicing.**
   Owner: Operations Director | Short supplier-records exercise per home, ahead of renewal

The information was already there. It was sitting in your seven spreadsheets, waiting to be seen. The only question was whether you saw it before the renewal, the lender or the buyer did.
